

Expertise in Improving Process Efficiency, Product Quality, and Minimizing Waste

3200 Series Temperature/Process Controllers

Benefits

The innovative range of 3200 controllers offer precision control of temperature and other process variables together with many advanced features not normally found in this class of controller.

- Precision Auto-tuning Eurotherm PID control
- Optional 8 step profiler/programmer
- Very simple to set up and use with quick codes and configurable menu lists

Key features

- 8 Segment programmer
- Heater failure detection
- Current monitoring
- Customizable Operator messages
- Recipes
- Modbus communications
- Analog and digital retransmission
- Remote setpoint
- Type approved EN14597 TR, EAC, CCC (Exempt)
- Multi-language support (English, French, German, Spanish and Italian)

3200 Series Temperature/Process Controllers Specification

The emphasis of the 3200 Series Temperature/Process Contoller is on ease of use. A simple "Quick Start" code is used to configure all the functions essential for controlling your process. This includes input sensor type, measurement range, control options, and alarms, making "Out the Box" operation truly achievable. In operator mode, every parameter has a scrolling text message describing its function and is available in English, German, French, Spanish or Italian. More advanced features are configured using Eurotherm iTools, a PC-based configuration wizard which is an easy to use and instructive guide to all the functions in the controller.

Heater Current Monitoring

A current transformer input provides display of the heater current and a health check on the load. Heater diagnostics including full and partial open circuit, and short circuit are displayed as scrolling alarm messages as well as providing an alarm output. On the 3208 and 3204 a front panel ammeter displays the heater current.

Setpoint Programmer

Heat treatment profiles can be programmed using the 8-segment programmer. Holdback ("guaranteed soak") can be used at the beginning of each segment. A digital event output can be triggered in any segment to initiate actions within the process.

Custom Text Messaging

Custom messages can be created with Eurotherm iTools and downloaded to the 3200 controller to display when an event, alarm or process condition occurs. This provides the operator with good visibility of the status of the process.

Remote Setpoint

An option exists for the 3200 controller to have a Remote Analog Input. This can be either volts or mA and is used to allow the setpoint to be generated by a master controller or PLC.

Recipes

Using Eurotherm iTools, recipes can be created that may be used to change the operating parameters of the 3200 controller simply by selecting a new recipe using the HMI or digital input. This is very useful where multiple products are processed using the same controller but require different parameters to be set.

Timer

An internal timer is configurable as an interval timer, delay timer, or to provide a soft start for hot runner control.

Setpoint Retransmission

Sending the setpoint or other parameters from the 3200 controller to slave devices can be achieved either by using conventional analog communications or using Master Modbus communications. Master Modbus in the 3200 controller allows a broadcast of a single parameter to the network.

A typical application is a setpoint being retransmitted to a number of slave controllers in a multi-zone furnace.

Modbus Communications

All units support both EIA232 and 2-wire EIA485 communications using the Modbus protocol. The 3216 supports 4-wire EIA485.

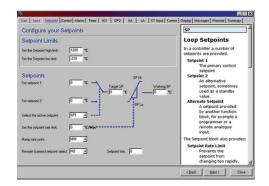

Configuration Adaptor

Eurotherm iTools configuration to all 3200 controllers can be achieved by using a USB configuration adaptor. It provides Eurotherm iTools with the ability to communicate with and

configure devices without the need for any power being connected.

Eurotherm iTools Wizard

Used to simplify the set up of 3200 series controllers. The wizard guides the user through the configuration process with interactive help and graphical demonstrations of features.

3200 Series Temperature/Process Controllers Specification

General				
Environmental Performance				
Temperature limits Operation:		0 to 55°C		
	Storage:	−10 to 70°C		
Humidity limits	Operation:	5 to 90% RH non condensing		
	Storage:	5 to 90% RH non condensing		
Panel sealing		IP65, Nema 12 / NEMA 4X (3216 only)		
Shock		BS EN61010		
Vibration		2 g peak, 10 to 150 Hz		
Atmospheres EEPROM		<2000 metres		
		Not suitable for use in explosive or corrosive atmosphere*		
		Rated lifetime 100,000 write operations		
Electromagnetic Compatibility (EMC)				

Emissions and immunity		BS EN61326	
	Electrical Safety		
	BS EN61010	Installation cat. II; Pollution degree 2	
	INSTALLATION CATEGORY II The rated impulse voltage for equipment on nominal 230V mains is 2500V.		
POLLUTION DEGREE 2 Normally, only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation shall be expected.		**

Notes

- Calibration accuracy quoted over full ambient operating range and for all input linearization types.
- 2. Contact Eurotherm for details of availability of custom downloads for alternative sensors.
- 3. Voltage output can be achieved by external adaptor.
- 4. By using recipes five SP programs can be stored.
